

MPL – Mobile Problem Locator

ComSonics, an employee owned company, is the global leader in proactive plant maintenance, providing solutions to ensure HFC plant integrity and performance improvement.

The ComSonics Mobile Problem Locator (MPL) application is a smart phone application designed to provide cable technicians with a simple tool to help maintain their network. Targeted for use with ComSonics' QAM Compass via Bluetooth connection to provide contractor work verification.

- view and close leakage work orders
- access to the GENACIS leakage management application.
- document leaks or non-leakage related faults in the cable plant
- record non-cable issues such as damaged phone or power lines. (non-cable issues can be reported to the applicable utility for action)
